

Auto-fit Visual Cases

Short items: should use four columns

- a) A b) B c) C d) D

Text: should reduce before wrapping

Forced four-column reference: the first two items wrap.

- a) Medium length task with detail b) Evaluate slope at zero c) Short d) Short

Auto-fit with the same content backs off to the largest no-wrap layout.

- a) Medium length task with detail b) Evaluate slope at zero
c) Short d) Short

Mixed text and math: should reduce before wrapping

Forced four-column reference:

- a) Find $f'(0)$ for $f(x) = x^2 + 3x$ b) Solve $2x - 3 = 0$ c) Short d) Short

Auto-fit:

- a) Find $f'(0)$ for $f(x) = x^2 + 3x$ b) Solve $2x - 3 = 0$
c) Short d) Short

Math: compact expressions can stay dense

- a) $x + 1$ b) $2x - 3$ c) $\sqrt{5}$ d) π

Explicit multiline content: already-multiline is allowed

- a) First line second line b) Short c) Short

Fill mode: wide text auto-spans, short items pack densely

- a) Choose the correct answer for each question below. b) Paris
c) London d) Berlin e) Rome

Uniform mode: same content forces one column

- a) Choose the correct answer for each question below.
b) Paris
c) London
d) Berlin
e) Rome

Fill mode: medium item auto-spans 2, short items fill remaining cols

- a) Medium length task with detail b) A c) B
d) C

Uniform mode: medium item forces 2-col layout

- a) Medium length task with detail b) A
c) B d) C

Spans in fill mode: full-width row, then dense rows

- a) b) A c) B d) C e) D

Spans in uniform mode: full-width row forces all rows to one column

- a)
b) A
c) B
d) C
e) D

Fixed-size figures: too-wide cells force fewer columns

- a) b) c) Small

Typst figure blocks: intrinsic height does not count as a new wrap

- a) b) Text c) $a^2 + b^2 = c^2$

Figure 1: small box

Alias: fit should behave like auto-fit

- a) A b) B c) C d) D

Max cap: many short items stay capped

- a) A b) B
c) C d) D
e) E f) F

Long content: forced four-column reference

- a) Differentiate $g(x) = x^3 - 2x + 5$ and evaluate the derivative at the origin b) Explain why the sign of $h(x)$ changes exactly once on the interval c) Give the exact value of the area under the graph between the two roots d) State the monotonicity intervals and justify every endpoint

Long content: auto-fit backs off

- a) Differentiate $g(x) = x^3 - 2x + 5$ and evaluate the derivative at the origin
b) Explain why the sign of $h(x)$ changes exactly once on the interval
c) Give the exact value of the area under the graph between the two roots
d) State the monotonicity intervals and justify every endpoint

Already wrapping at one column: auto-fit stays at one

- a) This item is intentionally extremely long, long enough to wrap even before the task block is split into columns, so auto-fit cannot find a no-wrap multi-column layout.
b) B

Long labels: label width participates in fitting

- Question 1: Medium length task with detail Question 3: Short Question 4: Short
Question 2: Evaluate slope at zero

Numeric labels near 100: wider labels reduce density

- 98) Alpha 99) Beta 100) Gamma 101) Delta 102) Epsilon 103) Zeta

Wide gutters and indentation: less usable column width

- a) Medium length task with detail b) Evaluate slope at zero c) Short d) Short

Fixed label width: no hidden overflow

- a) Medium length task with detail b) Evaluate slope at zero c) Short d) Short

Partial span in fill mode: span can use two columns

- a) b) A
c) B d) C

Partial span in uniform mode: same span forces ordinary columns

- a)
b) A
c) B
d) C

Full span with long text: fill mode preserves dense later rows

- a) This instruction spans the full task row, so the later short answers can still use the densest fitting layout.
b) A
c) B
d) C
e) D

Full span with long text: uniform mode uses one ordinary column

- a) This instruction spans the full task row, so the later short answers can still use the densest fitting layout.
b) A
c) B
d) C
e) D

Tall figure: height alone should not reduce columns

- a) b) Text c) $a^2 + b^2 = c^2$

Figure 2: tall box

Wide figure: intrinsic width reduces columns

- a) b) Text c) $a^2 + b^2 = c^2$
d) D

Figure 3: small box

Figure captions: caption wrapping reduces columns

- a) Figure 4: a longer caption that would wrap in narrow columns
b) Text c) Short

Mixed content: text, math, block, figure

- a) Solve $2x - 3 = 0$ exactly b)
c)
d) Explain the sign of $f'(x)$ on the interval

Figure 5: small graph

Explicit multiline: accepted when it does not create new wraps

- a) First line second line b) A c) B

Explicit multiline: longer second line backs off

- a) First line an intentionally longer second line b) A
c) B
